

San Diego County

HIV* in the North Inland HHSA Region

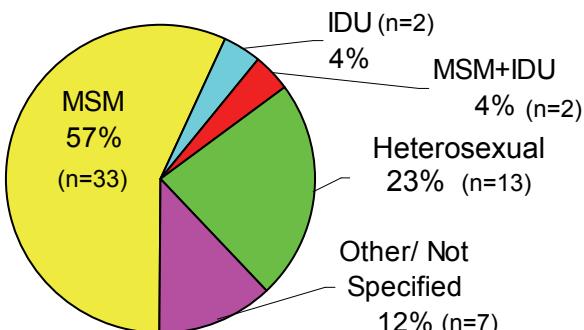

Gender

The HIV reporting system is new and rates cannot be calculated for HIV cases until the system is evaluated. Between the year 2001 and 2005, 57 individuals were diagnosed with HIV in the North Inland region. This is a small number of cases; proportions should be interpreted with caution and no comparisons have been made to the County overall.

North Inland Region, 2001-2005

North Inland Region, 2001-2005

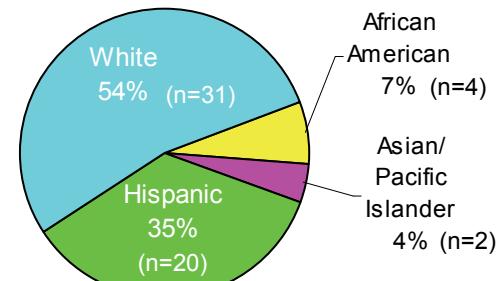

Racial/Ethnic Group

Most HIV cases reported in the North Inland region were among whites (54%). Hispanics followed with 35% of cases, African American with 7% and Asian/Pacific Islander with 4%.

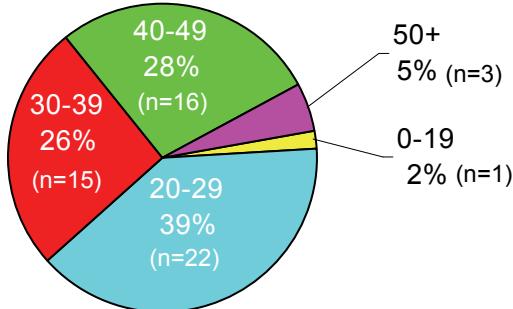

Mode of Transmission

Most cases of HIV reported in the North Inland region were MSM transmission (57%), with heterosexual (23%), other (12%), IDU (4%) and MSM+IDU (4%) following.
